

# **ACCESS ERP EXTENDED PROFILE**

## OVERVIEW

Access ERP is an end-to-end ERP designed to manage and monitor manufacturing and distribution operations. The system is currently being used in a wide range of industries, including aerospace and defense, engineering, construction, food and drink, and fashion.

By offering a single platform which brings together financial monitoring and reporting with purchasing and stock management, Access ERP aims to minimize time spent on administrative tasks through automated processes which can be programmed to adapt based on monthly data forecasts.

Access ERP can manage the entire manufacturing process from estimations and quotations, through to work orders and production scheduling.

The Access ERP system aims to give visibility to all areas of operation and enhance the productivity of the workforce through automation of daily tasks. The manufacturing and distribution ERP can be expanded by integrating other Access Group products such as financials, CRM, and purchasing systems.

As a web-based system, it can be accessed via any desktop and on mobile devices. The ERP can be hosted via the cloud or installed at the user's premises.

## SOFTWARE SPECIFICATION
