

SAP S/4HANA

EXTENDED PROFILE

OVERVIEW

SAP S/4HANA is a modular ERP that integrates across different business functions within an organization. It works to cover all day-to-day processes and offers integration with other data silos, including CRM.

The platform goes beyond simple connectivity, providing real-time data from both internal and external sources to help you make better decisions. For instance, it can calculate the value of individual business cases or even simplify the process of valuing your entire business.

SAP S/4HANA can be delivered as a cloud solution or installed on-premise and can be either an upgrade of [previous SAP ERP software](#), which can be installed in around six months, or a new, entirely customized solution.

This means that a team comes in and builds from the ground up. This option offers a cleaner and clearer software solution, but can take substantially longer.

The change in the modeling of data, which allows for decision-making functions, requires a full migration of data. This can be time-consuming, whether working with a previous SAP product or starting from scratch.
